

New project -> Version Control
url : <https://github.com/project.name>

EOD To Do

- save file
- select and then press commit (make sure staged0)
- press push button right after commit
- head over to github and merge pull request
- delete branch in github (button will pop up)
 - Resolve conflicts (if any)
 - Leave a message + merge branches
- last back to R
 - Git checkout main (go to main)
 - git branch -D BranchName(delete branch)

In Morning

- Git checkout main
- git pull origin main (or just switch to local main at top right and then press pull button)
- Git checkout -b BranchName (create new remote branch)
- git push origin -u BranchName (push branch to github)

In Folder on laptop

- folder of project, select r.proj to open project again

Save Changes Without Commiting //BAD , DONT DO

Git stash

Git stash pop
